

Cylinder Speed Checker (Built-in Magnet Cylinder)

RoHS

3
measurement
modes

Speed (mm/s)

Time required for stroke (s)

Operation count (Times)

Realises increase in efficiency with visualisation of air cylinder operation.

- Quantification of cycle time improvements
- For reduction of numerical management/adjustment labour when starting up equipment
- For reduction of numerical confirmation/inspection labour during periodic maintenance

Example of cycle time measurement

IN574-95/-73

3 Measurement Modes

Speed [mm/s]

Measures the speed of cylinders.

Rated measurement range^(Note)
-1999 to 1999 mm/s

Note) Minus (-) is added to the measured value to distinguish the extension and retraction of a cylinder.

Rod extension end: Positive direction

Rod retraction end: Reverse direction (-)

* Although a measurement can be done even when the sensor is mounted in the reverse direction, the display direction is also reversed.

Time required for stroke [s]

Measures the time required for the stroke of the cylinder (rod retraction end to rod extension end).

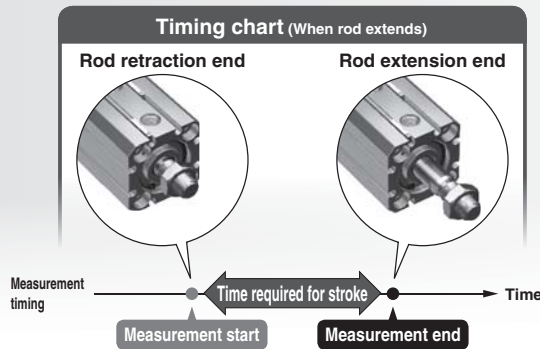

Rated measurement range^(Note)
-999.9 to 999.9 s

Note) Minus (-) is added to the measured value to distinguish the extension and retraction of a cylinder.

Rod extension end: Positive direction

Rod retraction end: Reverse direction (-)

Operation count (Times)

Measures the operation count of a cylinder for 1 minute.

Rated measurement range
0 to 999 times

■ Compact: 40 (Width) x 110 (Height) x 20 (Depth) mm

■ Lightweight: Approx. 65 g (Body)/25 g (Sensor)

* Excluding dry cell batteries.

■ Battery powered: 2A dry cell battery x 2,
continuous use for 15 hours or more.

■ With backlight

■ With auto power-off function*

* If a button is not operated for 15 min. or more, the power supply will turn off automatically.
